

TRUPOFIN[®] WAX KT 09

Nature:	Cationic soft wax emulsion.
Appearance:	Ivory fluid liquid.
% Total solids:	Approx. 9.5.
pH:	Approx. 4.
Charge:	Cationic.

Properties

TRUPOFIN WAX KT 09 is a soft wax in light cationic emulsion adapted to produce a medium matt finishes with smooth and greasy-warm touch and high sealing, especially on corrected grain leather. It imparts good sealing on bottom, before add the pigmented coat.

TRUPOFIN WAX KT 09 is a versatile product that can be used as much in polishing base coats, like touch modifier in resin base coat, like final touching product especially on garment leather.

Applications

It can be used in cationic and polishing base coat to levelling leather absorption.
In cationic resin and pigmented base coat as touch modifier and to improve ironing.
As touching agent in final coats on garment, shoe upper and leather goods.
It can be used mixed with our range of lacquers, to improve the final touch.

Storage: The product can be stored for one year, as long as it is kept at temperatures above 5° C and below 40° C. Extended periods of storage or extreme temperatures may modify its aspect, which can be remedied by stirring the product thoroughly before application.
